BURGLAR SCARED AWAY. Enters Rome of Joel J. Harris and Escapes Without Plunder.

A burglar entered the home of Joel J. Harris yesterday evening about 5:39, but was frightened away before he had an opportunity to get and plunder. The home is on Adams avenue across the street from the high school and next to the home of H. J. Peery, Mrs. Peery saw the fellow in the house and gave the alarm. He ran out of the back door climbed the fence into Utahna Park and disapepared. It transpired that he had entered by the front door, which was unlocked, although Mr. and Mrs. Harris were out at the time. Mrs. Peery gave a good description of the fellow to Officer Snythe, who went to the Harris home and made a thorough investigation.

PEOA.

CROPS MORE THAN AVERAGE.

No Frosts in Kamus Prairie This Summer Generous Irrigators-Campers Galore, Special Correspondence.

Aug. 19.—Mrs. Helena Aug. 19.—Mrs. Helena Vife of Wm. D. Alexay afternoon after an all cancer, and for the lexander has been a large her affliction with and patience. Mrs. doughter of Mr. and has born in Salt lable. The family movel late fiftles, and the seen here the lable for him to stop. A shot fired by Johnson took effect in the calt of Hospital Lable. The family movel late fiftles, and the sackful of jewelry, about \$290 worth and has been here the Special Correspondence.

Peoa, Summit Co., Aug. IS.—The grain, hay and potato crops promises to be above the average with the exception of the second erop of airalfa, which will be light owing to the fact that the water from mest of the canals and ditches has been turned into the river for the benefit of the farmers in Weber and Davis counties. A few of our citizens were opposed to this move, but the directors of the Peoa South Bench Canal and Irrigation company decided to close their canal for 10 days; some of the ditches were also closed, only one or two parties have kept the water in their ditches. Of course, we needed the water, but in the goodness of our heart towards our friends below, the majority of us have done as we would be done by, and, it is believed, we will not suffer very much from it for two neer cainstorms have fallen since the water was shut off.

There has been no frost since early in the season, which is a great benefit to our crops, gardens and orchards. Usually we have severe frosts in June and July, but which we have escaped this season, so far. It is not unusual to have our potatoes and all tender plants killed to the ground at least twice during the growing season. Last year the wheat was damaged by the frost and was not fit to make flour, hence our farmers have been forced to buy their bread stuff for the past year, which means an outlay of about \$30 per month. The elevation here is 6,200 feet.

Quite a large number of Peoa citizens have been to Provo and registered for the drawing of lead on the Uintah reservation; should they get good farming land there this settlement will loose from half to two-thirds of its population.

A large number of people from Salt Lake City are at Hollday Park at the head of Weber river, and are enjoying life to the full extent: campers are strung along the river from here for 22 miles east, all of whom report having all the fish they can eat.

Now that the chicken season is open the report of guns on all sides is heard from sunrise to sunset, and the spor sed has been here the sed has been here the time since then. She reat strength of charwenganty tenderness, any friends. Her husand four great-grand-

OAKLEY, IDAHO.

S. E. HALES' HOME BURNED. George Whittle Closes Honored Career At 65-Threshing Begun. pecial Correspondence.

Special Correspondence.

Oakley, Cassia Co., Ida., Aug. 18.—Monday, Aug. 7, while S. E. Haie and wife were away from home their residence took fire, in some mysterious manner, and burned to the ground with nearly all the contents, leaving the family with just the clothing they had on. No insurance, The origin of the fire remains a mystery. A GOOD MAN DEPARTS.

Elder George Whittle, an old and highly espected citizen of Oskiey died at his iome in the Third ward, Aug. 14, from James Lyange, trouble. Elder Whittl onic stomach trouble. Elder Whittle born June 25, 1849, in Hancock Co., (and since removing to the west, has d at Grantsville, Salt Lake, Ogden and vere held in the stake house today, at

EAGLE CHANGES HANDS.

The Oakley Eagle has again changed ands. Mr. C. P. Deal, the former editor ing to Twin Falls City. Idaho, where will continue in going to Twin Falls City. Idaho, where he will continue in the wapaper business. The new owner of the Eagle is Prof. A. M. Merrill of this place.

Threshing began today.

Mr. M. E. Young of Colorade, who is contractor on the south side of the Snake river, under the Minidoka scheme, has over 100 men and teams at work on the main canal.

ENGINEER GRUNKSY IS PLEASED WITH IDAHO.

Bolse Statesman-C. E. Grunsky onsulting engineer of the reclamation service, left Tuesday evening for Nevada. He made a trip over portions of the Boise-Payette project with District Engineer Ross. Sunday they visited the dam site at the head of the New York canal. On Monday they drove to Emmett and inspected the Black can-yon dam site, going from there to Caldwell. The next day they drove over some of the lands to be reclaimed south of the Boise river and inspected the site of the Deer Flat reservoir, winding up the day's drive at Nampa, At the latter place an informal meeting was held with members of the Chamber of Commerce, at which the necessity for closing up the right-of-way matter was discussed, among other things.
Mr. Grunsky was well pleased with

the great project, expressing himself as being surprised at the vast possi-bilities it presented. The visitor took occasion frequently to speak of Idaho as a state that offered the best opporas a state that offered the best oppor-tunities for irrigation work. He made the statement that, in his opinion, the first complete demonstration of the success of the reclamation law would be furnished at Minidoka. He found the settlers there deeply in earnest and all pleased with the manner in which the work was being pushed.

RIVER BOATS TIED UP.

Willis H. Stinson, a soldier and pensioner of the war of the Rebellion, died at his ranch in Weber canyon on July 15, from stomach trouble. Mr. Stinson was 57 years and six months old at the time of his death. The deceased was very highly respected. He leaves a wife and three children to mourn his demise. Boise Statesman: A Lewiston special to the Oregonian says: Boat service on the Snake river between Ripara and Lewiston is now totally tied up and service is not likely to be resumed and service is not likely to be resumed for several weeks. Several days ago the steamer Spokane was taken off, owing to the low state of water, but it was thought that the steamer Lewiston could make regular runs, owing to the fact that she was just rebuilt. Word was received from Captain Works tonight that the boat reached Almota and had to tie up, owing to the stage of water being too low to get over shallow places. The steamer returned to Ripara to remain until the river rises. The river is the lowest now in many Special Correspondence.
Peterson. Morgan Co., Aug. 17.—The harvesting of the grain will soon be through, and the second crop of luceru is being cut. The crops in Morgan country, generally speaking, are very good. The water has held out well to mature them. The Writer saw in the "News" sometime ago that the hot weather, and low water in the river were killing the fish. Tals is all bosh Tau river is helding out good. Giant powder is the cause of fish dying. The river is the lowest now in many years, and at the Lewiston dock of the O. R. & N. company registers five-tenths above zero and is still falling.

SCIENTIFIC MISCELLANY,

Metallic tantalum, which is of such interest at the present time, was first prepared by Dr. Werner von Bulten by submitting tantalum tetroxide to an alternating tantalum tetroxide to an alternating electric current in a vacuum tube, the metal separating at the cathode. In a later process, a mixed sait of tantalub fluoride and potassium, and the resulting mixture of pure metal and oxide is separated by fractional distillation. The metal is so ductile that it can be drawn into a wire 1-800 of an inch in diameter. Mixed with unaltered oxide, it becomes harder than the diamond and tougher than the best steel, and at moderate cost it would be the ideal battleship armor. As a lamp flament, tantalum uses only half as much current as carbon for the same light. A peculiarity of tantalum is that it sometimes assumes the passive state, and a cell of two electrodes of this metal, with sulphuric acid as electrolyte, will not allow an alternating current to pass. Substituting platinum for one electrode, the current can pass in one direction only. Metallic tantalum, which is of such

The problem of the ascent of sap in trees, an English botanist points out, is yet unsolved. It appears that in the highest trees the total pressure would be nearly 100 atmospheres, and as we annot suppose that leaves can exer so intense osmotic suction, the only theory at all probable is that the liv-ing cells exert some sort of pumping action in the wood.

Wth a tensile strength often ex-ceeding 300,000 pounds per square inch, steel plane-wire seems to be the strong-est material known, and it possesses the additional valuable property of a very high elastic limit.

The new building material known as "Kremnite" is made in a factory near St. Petersburg, and consists of pow-dered clay, sand and fluorspar melted dered clay, sand and fluorspar melted together at a high temperature. The molten mass may be used like iron for molten mass may be used like iron for molded castings as well as blocks. The material can be colored in a variety of shades, may be ground or polished, takes glaze well, and gives a good initation of colored marble or other patural stone. It may be cast in large pieces of any desired form. It is well adapted for architectural and artistic purposes, yielding such products as purposes, yielding such products as hollow bricks, for buildings and stoves, fancy marble-like bricks, tiles for floors and sidewalks, and even thin corrugated plates for roofs.

A novel smelting process that is being generally adopted by mining works in Germany is designed for quickly melting any small portion of a large mass of metal. Such an operation is of great importance, for example, for opening the closged tapping holes of blast furnaces. The point to be acted upon is first heated by the oxyhydrogen blowpipe or electric arc, and oxygen under high pressure is thrown against it. The enormously high temperature thus generated at once liquefies the surrounding parts.

The use of milk of lime for quickly and effectively extinguishing fires in coal mines is recommended by Inspector Wolfgang Kummer, a German. The suggestion is not new, but has been newly tested with satisfactory results. The emulsion—which can be used with hand or power pumps—runs into and fills the crevices of the coal or mineral.

A peculiar process for separating non-magnetic particles like gold from sand has been patented by L. T. Weiss. The metallic particles in mass are electroplated with iron, by a special apparatus, and can then be separated by any magnetic method.

Improvement of the microscope has been the aim of recent inventors. In the ultra microscope a new method of illumination gives visibility to particles heretofore outside of the line of sight; and in the still later ultra-violet microscope the mode of illumination is a chief feature. The second instrument uses light of a wave-length of 275, while the shortest wave-length not absorbable uses light of a wave-length of 275, while the shortest wave-length not absorbable by ordinary lenses is 550. The difference depends upon the employment of quartz lenses, the source of light being cadmium electrodes, and the detail obtainable with the short rays is remarkable. The naked eye sees nothing through such a microscope, an eyeplecontaining a fluorescent screen being necessary to convert the rays and make visible a picture of the object in green. The fluorescent screen is only reen. The fluorescent screen is only or focusing, however, and the real refor focusing, however, and the real results are obtained by photography, the plates being very sensitive to the rays from the cadmium electrodes. The results differ much from those of ordinary illumination, some structures being penetrated by the cadmium rays while others are not.

A rather unexpected danger in coal mines, as also in other places, has appeared. In an English mine an ordinary 190-voit 16-candie-power lamp proved to be capable of causing smoke to rise within three minutes when imbedded in coal-dust, and of producing flame within 28 minutes when lad on flame within 25 minutes when laid of the top of coal-dust. In other experi-ments, heat was generated so rapidly ments, heat was generated so rapidly that when the lamp was partly covered by coal-dust, the bulb exploded in four minutes at 450 deg. F., and at a certain point combustion was begun in the dust and continued after removal of the lamp. Careless laying down of a lamp might start a fire quite unnoticed.

A steel of special hardness, patented in Germany by F. Munster, results from subjecting the molten metal to a blast of nitrogen.

Man rides Sliver King, the high div-ing horse, Saltair tonight, 7:30,

"Yes" or "No" does not ans-wer all the questions of this world. There are generally some "Ifs" and "And's" to be consid-

ored.
